V-ROLL SYSTEM

Dock Smarter. Protect Better.

Specifications	
Components	G2 Cubes G2 Connecting Pins with Sliding Nuts V-Cubes with Rollers Entry Cube
Colours	Beige & Gray
Material	High-density polyethylene resin (HDPE) & TPE

KEY FEATURES

- Suitable for jetskis and boats up to 1360kg
- High Quality TPE Rollers – Effortless
- Keeps boats and jetskis dry above water
- Upgradable over time without the need to replace the complete system
- G2 Cubes - 20 Year Factory Warranty
- V-Cubes - 7 Year Reducing Factory Warranty
- Rollers - 1 Year Warranty

Introducing the V-Roll System, a fully modular docking solution designed for effortless boat and jetski launching. Featuring V-shaped cubes and heavy-duty rollers, it ensures effortless gliding, precise alignment and secure positioning.

BUILT TO LAST

Engineered from premium-grade HDPE, the V-Roll system delivers the same rugged durability and exceptional lifespan you've come to expect from our standard modular cubes. This high-quality construction ensures your investment remains rock-solid, season after season, standing up to the harshest marine environments without compromising on performance.

TAILORED TO YOUR CRAFT

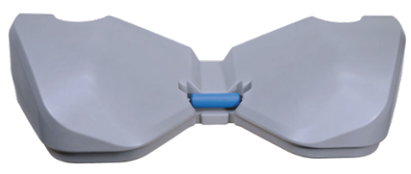

Because no two watercraft are alike, the V-Roll features a fully modular design that effortlessly scales to your needs. Whether you are docking a agile personal watercraft (jetski) or a boat, our system adapts to give you the exact configuration required.

THE V-CUBE

Equivalent in width to two standard cubes, the V-Cube features a specialized V-shaped center designed to accommodate a wide variety of hull designs. Equipped with heavy-duty rollers along both the center and sides, it provides maximum hull protection while ensuring your watercraft glides on and off the dock completely effortless.

THE ENTRY CUBE

Designed to act as the perfect guide, the Entry Cube features a wider, smooth surface with a specialized opening that effortlessly aligns your watercraft with the center of the system. It is also equipped with a central roller to facilitate the boarding of sharper, deep-V hulls. This module ensures flawless positioning from the very moment you approach the dock.
